*We Make Your
Laundry Operations
Work For You!*

Why consider the Lint Check™ program?

Over the past decade, our team has been setting new standards for the Commercial Laundry Industry. LINT CHECK™ has worked alongside clients that include industry leaders, associations, professionals, and governing agencies across Canada.

Through research and study, LINT CHECK™ has developed a highly effective Laundry Operations - Cost Reduction Program (LO - CRP) that is yielding excellent results in helping clients save hundreds of thousands of dollars in operating costs annually- while increasing their laundry productivity and reducing their overall carbon footprint and the environmental impact.

This specialized program focuses on three major areas:

1 Scheduled Dryer & Dryer Vent Lint Remediation Services.

By Maintaining Efficiencies, providing Fire Hazard Prevention with fewer breakdowns and repair.

The Laundry Operations Cost Reduction Program was very successful in reducing the carbon footprint of the home by 4,708 hours or 197 days of dryer operations eliminated.

Also, the reduction of 394,200 gallons of water was conserved and has significantly reduced the environmental impact.

2 Establish an Effective Commercial Laundry Process.

In many locations, we have found that the daily laundry process is inefficient, creating low productivity in the laundry production. This equals higher costs on a per load basis. We review, document, and calculate the current laundry process productivity through our **Pre-Laundry Assessment Analysis**.

The **Pre-Laundry Assessment Analysis** provides our team with important data to develop a new "Commercial Laundry Process" that will achieve the following:

- Maximize Efficiency
- Increase Laundry Productivity
- Reduce Many Laundry Operating Costs
- Produce Significant Cost Savings
- Extend the Lifespan of Laundry Equipment
- Lessen Repairs & Maintenance on Equipment
- Extend the Lifespan of the Laundry Inventory
- Lower the Environmental Impact
- Reduce the Carbon Footprint of the Home
- Improve Work Environment
- Prevent a Dryer Fire!

3 Realizing LINT CHECK™ Value Added Benefits.

At LINT CHECK™ we continue our quest to provide value added benefits for our clients, that will lower costs associated with laundry production and reduce the environmental impact.

Over the past decade, we have recognized different companies that brings beneficial value for our clients, great benefits for the laundry industry and the environment.

We embrace these companies that bring beneficial value added benefits (products, equipment or services) and incorporate them into our laundry programs that increase productivity and reduce costs for our clients.

For example, we incorporated fast drying *micro fabrics* into the daily laundry production. As a result, it reduced equipment operations, less repair, increased productivity , cost savings and lowered the environmental impact.

Through assessment, training and consulting, the LINT CHECK™ Laundry Operations Cost Reduction Program has a proven track record in providing significant value added benefits for all clients.
